HARRISONS'

The story of our Peach orchard at Berlin reads like a fairy tale. But unlike the fairy story, it is true—every word of it. Moreover, it is possible for growers in other parts of the country to duplicate, or exceed, the profits shown by our hundred acres.

From this orchard of 100 acres, containing about 10,000 trees, we sold in 1913 sixty-two cars of fruit; in 1914, forty-two cars; in 1915, fifty-two cars. A total of one hundred and fifty-six car-loads in three seasons, which gave a *net profit* of over \$50,000, or nearly \$17,000 a year.

Peach trees usually come into bearing the third season. No other tree fruit that we know of will make more money in such a short time as Peaches, provided the trees are planted on suitable soil, given proper care and cultivation, and the fruit picked, packed and shipped in the right way. The man who plants a commercial Peach orchard lays the foundation for a fortune.

From the beginning of this nursery we have been growing Peach trees for commercial plantings as well as for the small orchardist, but we soon discovered that buds cut in the usual way were not altogether reliable, so we at once planted an orchard containing trees of every variety we grow. From these trees we cut the buds used in propagating the Peach trees that are sold from our nursery. When you buy a Harrison Peach tree you may be absolutely sure that it was budded from bearing trees of the same variety.

Ray Peaches like these are profit-makers

PROFIT-MAKING

SIX SELECT VARIETIES ALL HARRISON-GROWN

We have grown these sorts in our nurseries, and fruited them in our commercial orchards. We know that they are the big profit-makers among the hundreds of varieties on the market today.

We can furnish them in several sizes: 2 to 3 feet; 3 to 4 feet, $\frac{3}{8}$ in.; 4 to 5 feet, $\frac{1}{2}$ in.; 4 to 6 feet, $\frac{5}{8}$ in.; 5 to 6 feet, $\frac{3}{4}$ in.; 5 to 7 feet, $\frac{3}{4}$ in.; 6 to 7 feet, 1 in.

Belle of Georgia
Carmen
Champion
Elberta
Ray
Salway

These are only a part of the varieties we grow. The full list will be found in our catalogue—write for it, if you do not have a copy.

KIEFFER PEAR TREES

A money-maker for every Pear-grower in the country. It bears freely; fruit is large, with yellow skin, slightly tinged with vermilion; flesh juicy, and of a quality not found in other sorts. It is a good market Pear, for it is hard enough to stand shipping without bruising, and can be placed on the market in perfect condition.

The trees we offer this year are extra heavy, both in roots, trunks and tops. In 2-year-old trees we have them 6 to 7 feet high; in 3-year-olds, 7 to 8 feet. Write for prices on large quantities.

PEACH TREES

We know what these Peach trees are because we grow every one of them from the Peach-pit to the finished tree that is sent to you. We plant the seeds in rows like corn. From the time they sprout till they are put on board the car for shipment, they are cultivated and pruned and sprayed so that no chances for securing better development or for bettering them in any other way are overlooked. The real worth of our Peach trees is proved best by many hundreds of bearing Peach-orchards planted with trees grown at Berlin. We would like to have you come to Berlin, see the nursery and our ways of growing trees.

Elberta Peach Trees from Harrisons' Nurseries

HARRISONS'

There are a good many reasons why Harrisons' Apple Trees are planted in big commercial orchards of several hundred acres, in the smaller orchards which should be a part of every American farm, and in the suburban home-garden where there is room for only a few trees. Here are some of the reasons:

Harrison Trees are grown at Berlin, under expert supervision. We sell only the fruit trees that we grow.

Harrison Trees are budded from fruiting orchards. They are absolutely clean and free from disease.

Mammoth Black Twig Apple, third growing season

GROWN-RIGHT

Harrison Trees are budded on the best French-grown roots obtainable. This has been our rule for years.

Harrison Trees are as hardy as the hardiest. They have well-ripened, firm wood when we sell them.

Harrison Trees are larger at two years of age than most other trees at three years. This is because our trees are grown right.

We have more than 2,500 acres of land planted to nursery stock, and several hundred acres in commercial Apple and Peach orchards. We believe that we have more land under cultivation than any other nursery firm in the world.

The knowledge gained in over thirty years of nursery work, as well as the experience of growing fruit for market, is at the service of our customers. We will be glad to assist anyone in making a proper selection of Apple trees for a certain location. Our intimate connection with orchards in Maryland, Delaware, New England, the Virginias, New York, Ohio, the Oregon district, and in Canada, gives us accurate information about the varieties that are productive and profitable in all the apple-growing sections of the United States.

If you are located in the Southern or Middle Atlantic States, we believe that some of these varieties will meet your conditions of climate and soil:

Gravenstein
Jonathan
McIntosh
Oldenburg
Paragon or M. B. Twig
Rome Beauty
Stark
Staymans Winesap
Wealthy
Williams Early Red
Winesap
Yellow Newton
York Imperial

In sections where the winters are cold, like New

APPLE TREES

England, Northern New York or Canada, experience has shown these apples among the leaders:

Baldwin
Ben Davis
Gano
King
Northern Spy
Rhode Island Greening
Smokehouse
Spitzenburg
Summer Rambo
Winter Paradise (Sweet)
Winter Rambo
Wolf River

Write us about the location of your prospective planting, tell us about how many trees you can use, (or give us the number of acres). We will be pleased to advise you, and quote prices on the number of trees needed.
